Application/Control Number: 09/174,461

Art Unit: 2613

1. Applicants' arguments from the amendment filed January 9, 2006 have been noted and considered, but are deemed moot in view of the following new grounds of rejections.

Page 2

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-7 and 25-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over. Moreton et al of record (5,835,133) in view of Bacs, Jr. (5,699,112).

Moreton et al discloses an optical system for single camera stereo video as shown in Figures 2A, 3-5, 8A-8C, and substantially the same camera and method for image pickup by a camera as claimed in claims 1-7 and 25-31, comprising substantially the same plurality of image pickup means (90 of Figure 2A, the optical paths of receiving left/right images) for picking up a plurality of images of an object, respectively; display means (330 of Figures 8A-8C) for displaying images picked up by the plurality of image pickup means; recording means (see column 3, line 14, column 6, lines 59-62, column 11, lines 31-49, column 12, lines 21-57) for recording the images picked up by the plurality of image pickup means on a recording medium; memory means (720 of Figure 8C, see column 12, lines 58-67) arranged both as a buffer of the display means and as a buffer of the recording means (i.e., memory means 720 of Figure 8C acts as a buffer of the recording means derived from 705 for generating stereo recorded video (see column 3, line 14, column 6, lines 59-62, column 11, lines 31-49, column 12, lines 21-57), thereby generating a recording signal from the images picked up by the plurality of image pickup means) so that the display means displays an image previously read out from the memory means

Art Unit: 2613

(i.e., a sequence of images are provided to memories 300, 310 and 720 from video supplies 100, 200, 705 so that the images (previously read out images from the memory) in memory n is displayed while new images are stored in memory m, see column 11, lines 32-49, column 12, lines 58-67); wherein when a plurality of the memory means are used for displaying an image picked up by the plurality of image pickup means, some of the plurality of memory means are used for a write operation and the others of the plurality of memory means are used for a read operation by switching between the write and read operations, whereby the plurality of memory means are used as a double buffer, and wherein when a plurality of the memory means are used for recording an image picked up by the plurality of image pickup means, all of the plurality of memory means are used for write operation in order to record each image picked up by the plurality of image pickup means, and after the write operation is completed, all of the plurality of memory means are used for read operation (i.e., as provided by 720 of Figure 8C, see column 12, lines 58-67); wherein the image is written in the double buffer in normal form and the image is read out from the double buffer in inverted form, wherein the image is written in the double buffer in inverted form and the image is read out from the double buffer in normal form, wherein the image is recorded in normal form when all of the plurality of memory means are used for write operation, and the image is read out in inverted form from all of the plurality of memory means after the recording is completed, wherein the image is recorded in inverted form when all of the plurality of memory means are used for write operation, and the image is read out in normal form from all of the plurality of memory means after the recording is completed (i.e., in Moreton et al, inverted read/write operation is dependent upon whether reflector pairs 30a, 30b of Figures 3-5 are used. Without the reflector pairs, images are read in inverted form (inherent).

Art Unit: 2613

With the reflector pairs, images are read in normal fashion since the images are inverted by the reflector pairs. Writing in inverted or normal fashion is directly dependent on whether images are read in inverted or normal fashion.).

Page 4

Moreton et al does not particularly disclose, though, wherein the display means displays an image previously read out from the memory means in the case that the recording means records the images stored in the memory means on the recording medium as claimed in claims 1 and 25. The particular recording of stored images, in general, is however old and well recognized in the art as exemplified by Bacs, Jr. (see column 6, line 63 to column 7, line 13). Therefore, it would have been obvious to one of ordinary skill in the art, having the Moreton et al and Bacs, Jr. references in front of him/her and the general knowledge of the particular display, storage, and recording of images, would have had no difficulty in providing the recording means of Bacs, Jr. after the memory means 720 of Moreton et al for the same well known permanent storage of images for later viewings purposes as claimed.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 2613

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Richard Lee whose telephone number is (571) 272-7333. The Examiner can normally be reached on Monday to Friday from 8:00 a.m. to 5:30 p.m, with alternate Fridays off.
